Think you know your way around a code editor? Think you know your way around a code editor? Without the hassle of IDE, CodeAssistor is here to save you the time. Create engaging, useful and secure web apps with CodeAssistor. Whether you're a seasoned web developer or have no idea

The CodeAssistor Editor Crack+ Activation (Latest)

CodeAssistor is a small and easy to use source code editor. You can edit and view your code in a treeview, an inspector like any typical IDE. It allows you to browse your files and open any file in your file explorer. You can write, compile and run your code while writing it all from the one place. It also supports a number of languages. Q: Error with tkinter Frame I'm new in Python and I need some help. I'm learning to develop a application with Tkinter, and I need to display a "Spaceship" in the left side and a list of the rows and columns in the other side, as you can see in this picture: However, when I execute the code, the program crash and force me to make a "System Restart", please, can someone help me? Python Version: 3.6.4 My Code: from tkinter import * from tkinter import Frame from tkinter import Label from tkinter import Scrollbar from tkinter import Tk from tkinter import * from tkinter import Tk import tkinter as tk master = Tk() master.geometry("250x250") master.title("Space Game") master.style = tk.Style() root = Frame(master) root.geometry("250x250") root.rowconfigure(0, weight=1) left = Frame(master) left.geometry("150x170") right = Frame(master) right.geometry("150x170") space_bottom = Scrollbar(right) space_bottom.pack(side=BOTTOM, fill=X) space_left = Scrollbar(left) space_left.pack(side=LEFT, fill=Y) space_left.config(command=space_bottom.set) space_bottom.config(command=space_left.set) root.rowconfigure(1, weight=1) label = Label(master, text="Click in Space to start the game") label.pack() space_left.config(command=left.rowconfigure, 0, weight=1)

The CodeAssistor Editor Crack+ [32/64bit]

The CodeAssistor Editor is a code editor for Linux, primarily a text editor providing full code editing functionality on standard unix terminal based systems using GNU Emacs. I come from the MAC land where almost any Desktop application was a frontend for the source code. I really missed that feature on my Linux systems since I decided to write a small standalone code editor for Linux. The author of the application is trying to make the application as small as possible. What's New So, what's New in this Version? I've fixed some bugs. All Input Output functions are now working. Almost all UI functions are now working. (the last 10% will be included the next release) And a few minor changes.
