Web pages may be run alongside WebLoad to record scripts and accurately evaluate performance details in HTML or JavaScript viewing mode. Evaluation and conclusion The app runs on a significant amount of CPU and RAM, which is normal for a benchmarking application. It executed commands swiftly and generally worked smoothly in our tests. On the other hand, it froze several times when we attempted to create new projects for

recording and editing scripts, and we eventually had to terminate the app's process to restart it. Nevertheless, WebLoad has a lot to offer to serious users who want to run multipurpose and critical tests on their Internet applications, especially considering the fact that it's free.
