Chrome as the default browser on the Mac is a very powerful and advanced browser. I personally use it over Safari. However, there is no need to use the latest version of the browser to enjoy the best features. In fact, you can use the Chrome from any version number as it runs very smoothly on any computer and has all the capabilities you need. There are some issues that may hinder you in using it the way you want. Here is how to fix them.

Why Chrome Won't Open

The web page at the root of your computer might be broken or corrupted. The web page may be blocked by the firewall. Any of the third-party extensions or add-ons might be corrupt. You might have a pop-up blocker enabled. You might have a content blocker enabled. Windows firewall might be blocking the Chrome. The file you are trying to open might be corrupted or damaged. Fix These Common Problems on the Mac

Fix Your Webpage

If the web page is not loading, it's possible that your internet connection is slow or temporarily lost. Switch to a different network or use a different computer to browse. Update Your Browser Download the latest version of Chrome 80eaf3aba8
