[bug]

## What's New in the Desklog?

Desklog is a comprehensive, modern, and complex project tracking software that helps with the real-time productivity and workflow monitoring of teams. It includes useful task management, project planning, project scheduling, attendance management, screen monitoring, and bug tracking features, hence, allowing project leaders to plan and schedule all the intricacies and aspects of any project. Before anything, it's worth noting that the app can only be acquired via its official portal, and requires users to submit an e-mail address. Furthermore, in order to be deployed, Desklog requires Java 8 with OpenJFX, as well as PHP 7.2 (including PHP 7.2 SQLite and cURL). The app allows project leaders to schedule various, individual tasks to the required resources. Desklog boasts unique and efficient task management features that allow users to split the project plan into easy-to-understand tasks, allocate deadlines for said tasks, and analyze the performance and productivity numbers. This can be done via reports that are generated for each task performed by individuals within the allocated deadline. Therefore, the authorized person, usually the project leader, can access the reports from any location in order to ensure that the project is going as planned. Desklog also allows users to make use of an efficient bug tracking system. Team leaders are allowed to track bugs based on a set of specific rules. This allows them to classify the bug and assign it to the required team member. Employee or team member productivity (work status) can be easily tracked via Desklog's screen monitoring system that captures automatic screenshots. The automated screenshot system helps project leaders determine how individuals perform on the assigned tasks. Last but not least, it's worth noting that the software can be used with both Agile and Scrum methodologies. Users can track the iterations and the changes and analyze the customer feedback in regards to them, track the sprint plan and share the plan with team members, and allow for all-round effective team interaction. Desklog is a comprehensive, modern, and complex project tracking software that helps with the real-time productivity and workflow monitoring of teams. It includes useful task management, project planning, project scheduling, attendance management, screen monitoring, and bug tracking features, hence, allowing project leaders to plan and schedule all the intricacies and aspects of any project. Before anything, it's worth noting that the app can only be acquired via its official portal, and requires users to submit an e-mail address.
