AutoLISP, Visual LISP, and VBA is available for all AutoCAD models and is accessible through the application menu. .NET is an extensible and object-oriented extension of VB6. It was built upon COM and is compatible with all versions of Microsoft Windows. The ObjectARX extension allows for a lower-level integration of third-party AutoCAD-based applications into AutoCAD. The various API implementations are described below. AutoLISP and Visual LISP AutoLISP is the official, interpreted programming language for AutoCAD. This language is also available for AutoCAD LT and Architectural Desktop. AutoLISP (AutoCAD Language for Interpreters) is an object-oriented programming language used to control other applications, such as AutoCAD. AutoLISP allows programmers to extend the capabilities of AutoCAD by running applications and scripts. The language is based on a dynamic link library (DLL). The AutoLISP language is object-oriented and designed to take advantage of the AutoCAD class libraries, giving AutoLISP programmers greater control and flexibility than VBScript or Visual Basic scripts. In addition, the AutoLISP language has a class and object mechanism to simplify the creation of objects for various objects and to ensure object-oriented development. The language supports the concept of objects and classes to allow greater control of programs. AutoLISP supports object-oriented programming and is fully object-oriented, with static, class-based, object-oriented, and function-based programming paradigms. AutoLISP is well suited for use in AutoCAD's AutoCAD Architecture and AutoCAD Electrical applications because it can manipulate all AutoCAD object-type data. Visual LISP is a free-standing and very similar interpretation language for AutoCAD. VBScript and Visual Basic VBScript and Visual Basic are scripting languages used to control AutoCAD and other applications. They are the most popular scripting languages and are currently included with AutoCAD but can also be purchased separately. A programmer can use AutoCAD to write scripts in VBScript or Visual Basic, and the scripts can be run within AutoCAD or run from the command line. These languages also allow the programmer to automate some AutoCAD operations. VBScript is a client-side scripting language for Microsoft Windows. It is a subset of the Visual Basic a1d647c40b
