Once you start using Photoshop and meet its many complex layers, you can easily understand why it is much more than just a simple tool. Tools and Features To give you an idea of what Photoshop is all about, I include a sampling of some of the programs' tools and features in the following list:
Clone tool: This tool (see Figure 4-10)

is a fantastic way to get rid of unwanted objects in your photo. It combines the clone options of Brush and Airbrush tools to enhance your ability to remove objects in your image. Blend modes: This feature, shown in Figure 4-11, helps you choose an opacity setting for your layers. Its name, Blend Modes, refers to a photographic process in which you bleach (in this case, lighten) a portion of a photo, and then fade that area into another color. Blend Modes enables you to choose one of six such areas to lighten or darken. These areas include Color Burn (heavily lightens the

image), Color Dodge (heavily darkens), Lighten to Color, Darken to Color, Multiply (makes the colors larger), and Screen (dilutes colors).

Gradient Fill: This method is yet another way to create a layered look in your photos. As shown in Figure 4-12, it is a great way to add color to a photo's background. You can create a Gradient Fill, shown in Figure 4-12, by choosing one of several shapes and applying a gradient to its layer. You can also choose two different colors and use the Gradient tool to create what is essentially a striped or zigzag effect. Feather filter: You can use this

tool (shown in Figure 4-13) to soften the edges of objects. As shown in Figure 4-14, you can edit the object's individual settings with the Feather option. The Highlight Edges filter is also available. With this option, you can determine just how much compression (lightening of a photo's edges) and just how much blur (blurring out the image's edges) to apply. Levels: These tools, shown in Figure 4-15, help you adjust the overall brightness and contrast of an image. Figure 4-10: Use the Clone tool to smooth out unwanted objects. Figure 4-11: Check out this feature to

specify the opacity of layers. Figure

Decrease of peripheral CD4 T lymphocytes in patients with idiopathic thrombocytopenic purpura. As chronic idiopathic thrombocytopenic purpura (ITP) is characterized by an abnormal immunoregulatory response, the present study was undertaken to investigate the CD4 T lymphocyte subpopulations in peripheral blood of 15 patients with ITP. Peripheral T cells were defined and analyzed by indirect immunofluorescence (FACScan) and by immunomagnetic

separation using monoclonal antibodies. The T lymphocyte subpopulations were defined according to their antigenic specificities defined by monoclonal antibodies and to their different cell-cycle stages. With our cytometric study, we show a decrease of circulating CD4 T lymphocytes in patients with ITP (42.5 +/- 23 vs. 79.5 +/- 9.8; P = 0.01). The proportion of T cells in G0-G1 phase was not significantly modified, whereas the proportion of T cells in the S phase was significantly increased (21.8 +/- 12.3 vs. 10.0 +/- 5.3; P = 0.02). Furthermore, we showed a decrease of

the percentage of T lymphocytes that express the CD4 molecule (5.2 +/- 2.2 vs. 7.3 +/- 3.6; P = 0.2) and of the CD4/CD8 ratio (1.7 +/- 0.6 vs. 2.7 +/- 0.9; P = 0.01). These results support the view that the decrease of circulating CD4 T lymphocytes is probably due to an abnormal activation-induced cell death of this specific subset of lymphocytes.

Q: Delphi: Inorder Traversal/Traversing a Binary Tree I'm creating a program in Delphi where I need to traverse a tree. I have read about the functions that do this, such as EnumerateSubtrees which in Delphi calls TWiTraverseNode. Can

anyone provide a delphi code that will do a inorder traversal of a binary tree? Thank you. A: Considering you're using Delphi 2009, I might have a few suggestions: First, the EnumerateSubTrees function is a recursive function and may be relatively slow if called too many times on the same data structure (say, a large binary tree). If you're

Tideline Mamta Sood While India's Prime Minister Narendra Modi has been extolling the virtues of "Swachh

Bharat” to the world, many people living in the country are no more than that: dirt poor, destitute people. The Swachh Bharat Abhiyan has taken the whole country by surprise as the toilets of India now have a new slogan of “jan-jan ko maal ke laado ke kya kar” (what will a clean India give to the poor?). The programme was launched on Gandhi Jayanti (birthday of Mahatma Gandhi) on October 2, 2014 with a lot of fanfare. However, when I went to the door of my home in the posh Lokmanya Tilak Garden area in Mumbai (Swachh is well maintained here), I saw that what the Modi govt

claims to be clean had been left to just a “do”. It wasn’t even a “not-do”, more of a “do-not-do-it”. Instead of cleaning the toilets of these areas, the “do” part of “Swachh Bharat” means a note on a board placed outside the toilet. The other thing that was expected to come under the ambit of “Swachh Bharat” was the cleanliness of the roads. It appears that it has only been attended to here for a partial time. The entire road, run-way, footpaths of Dr DN Nagar, Shivaji Nagar, New International Terminus, CGO Road, Governor Towers, Mulund Road, College road, Haji Ali road, Dr Sanker

Khosla Road, Parel Road, Commercial centre, Kurla Road, Dahisar road, all show that they do part of Swachh Bharat has been completely ignored and the real thing has been forgotten here. The government's inaction hasn't gone down well with the locals. The municipality doesn't seem to be bothered about the sanitation of public spaces and the grass in front of them is being eaten away by the stray dogs. The plastic garbage bins have also become a source of amusement for the dog and they seem to have a lot of fun playing with them. This is not a surprise, as these bins are not cleaned

by the municipality and the garbage is
laid on the road only
