

Each of the movements in FIFA 22 is defined by more than 100 data points, and it will combine these points of data to bring players' movements to life. How? The movement of each player in the game is determined by the position and weight of the player's head. As the player's head moves, these data points change and are used to calculate the player's moves based on speed, strength, and direction. As the player's head moves, these data points change and are used to calculate the player's moves based on speed, strength, and direction. In terms of physics, FIFA 22 uses a version of 3D physics that powers all the movements in the game. This allows for more realistic player-player interactions and most importantly, it enables the game engine to collect data on these interactions and apply it to the player movements. For instance, the head of a player can only move at a certain speed when it's being guided by the player's trunk, and tackles are also more difficult. One way is through the physics engine, which will make the collisions and tackles real for each player. The other way is through Player Intelligence (PI). FIFA 22 implements these data in two ways. One way is through the physics engine, which will make the collisions and tackles real for each player. The other way is through Player Intelligence (PI). First and foremost, the data collected through PI is focused on player behavior. This means the game engine not only analyzes how many tackles a player gets, but also how much success he has at each tackle. It then uses that data to judge the player's success at

What's new in Fifa 22:

- **Goalkeeper:** Take advantage of its new 360° awareness and heightened reflexes to overreact to spectaculars. A sharper, more powerful shot can still expect the goalkeeper to slide to his left and position himself in an unbreakable wall. Soccer is no longer a passing game but a poaching, feint, and toe-poke game.
- **Young players:** Expect more talented forwards, all with their own unique traits and abilities. Defend like no other player ever has - reposition any defender on the pitch with an instant 360° awareness to thwart counter attacks. Play in a 3-4-2-1 formation, the most difficult formation to defend in any sport, making your skill set the key to your team's success.
- **Revenge Mode:** The new Karma feature sends your enemies crashing to the penalty box for mugging your goalkeeper or chirping you from their team-mate side. Challenge your friends and enemies to play head-to-head online matches with unlimited chances to repel whippers!
- **Improved AI:** Intuitively read your opponents' game and outwit individual players using tactics perfected from thousands of seasons.
- **Improved ball physics:** It's time to sink the penalty kick and send the ball flying across the goal line! Volley, hoof, chip and scissor all now have a more on-point feel. Dynamic and unpredictable high speed collisions are now better balanced to ensure players will never stutter or fail to look off a forward pass.
- **Improved water gameplay:** FIFA in the yard! Let it rain. Get wet. Be the goal scorer. Showcase your free-kick and penalty technique. Create a waterfall of rivulets or create a mini-trampoline to rouse your opponent's keeper.
- **New Training Room:** Building on the Real-Match environment, the new Training Room allows you to recreate the play style and athleticism of your Real-World team by training individual players to enhance their skills. The more valuable and important a player is to your career, the faster the upgrades will occur. Master the equipment required to get the most out of the player, and be sure to use the Gloves trainer to raise your Power rating, flexibility, and ball control.
- **New Field:** Filled with more stars, and made up of more free
