Learn your digital camera's features and capability to produce final files that can be used in the computer and email. Learn which image file formats are best for the level of detail you need to show and the size of the image you want to present. Different formats support different levels of detail and other features. Understand the differences between resolution, pixel size, and megapixel count. The bit depth is also important, especially for images that are enlarged. Learn to decide how the "magic wand" feature

can make or break an image. Understand color matching and color wheels. Understand perspective; apply it to your images for a look that is both professional and natural. In this chapter, you master the many steps to produce your best images. For beginners and a steady hand, we cover the basics of image manipulation in Photoshop. Before you know it, you'll be creating your own images using the standard tools found in Photoshop or the Camera RAW plug-in. Photoshop can do much more than we can cover in a book. If you're lucky, however, you may be able to do what

you need to do right in Photoshop, right from the get-go. If you feel capable, so be it. You will be able to knock out many images in a short time and save the time and money of Photoshop or Photoshop Elements.

Producing an Image The first thing you should do when you open Photoshop or Photoshop Elements is make an image. That's right — you don't need a fancy camera or equipment to make an image. In fact, the best equipment you can have is a digital camera and a computer. If you choose to produce an image in Photoshop, go to File⇒New. If you choose the built-in image editor,

go to File⇒Open. If you choose to produce an image in Photoshop, you see the Open dialog box shown in Figure 11-1, open a photo you like in the Photos panel. If you choose the built-in image editor, you see the Open dialog box shown in Figure 11-2, open a photo you like in the Photos panel. It's important to note that you can have more than one image open at a time. If you choose an open file from the Photos panel, you can even view the image in separate windows (which are two in this example, but the actual number varies). ****Figure 11-1:**** When you open

One of the hardest things for a ham radio operator to do is to move from being a hobbyist to a full-time operator. There are a lot of operational, technical and financial considerations involved. Let's take a look at how to get started. Organize Your Space Your choice of radio will vary based on how often and where you plan to operate. You'll want to keep a variety of radios, antennas and other equipment in a small, readily accessible place. If you have lots of equipment, you can get some

organization software for your computer. For those who use a desktop computer, there are a number of inexpensive desktop storage cases that could work. Store extra power supplies and batteries in an area that is easily accessible. You may want to keep parts and extra equipment in an area where kids aren't allowed. For some callers, a little white noise is a great way to drown out the din. There are a number of home-brewed and commercially available white noise generators that can help. When you operate from home, be sure you have a place that can serve as a

workstation. If you can't afford or can't seem to find a suitable work area, consider setting up a small office in your home. You can use your office for ham radio operations while you work on other jobs elsewhere in the home. Learn About the FCC The Federal Communications Commission (FCC) establishes regulations and many of them apply to operators. An operator who violates the rules can be fined or even lose the ability to operate. It may be necessary for you to get a ham license to operate in the bands your selected radio will use. As you can imagine, the process of getting a

license can be very time consuming and expensive. Although it is often suggested that people operate as “spot” callers, that advice is not always the best course for new operators. It’s a good idea to get a preliminary license first to test the waters. Those who operate within the borders of the United States, but do not hold a license, must work with amateur radio rules. Make Sure You Know the Laws Federal and local laws govern amateur radio operations. Operating as an amateur is regulated and they have specific requirements, including registration, licensing and

experience requirements. You also need to have insurance to protect you and your equipment. Make sure you know the laws and regulations for where you will be operating.

1. Field of the Invention The present invention relates to a composite sheet material containing a cellulosic resin and various additives, which can be used to produce prepregs, sheets or laminated panels. 2. Related Art Composite materials obtained by applying a resin to fabrics have

superior properties such as heat resistance, chemical resistance, good mechanical properties, etc. The composite materials are usually prepared by either impregnating fibers or fabrics with a resin or by applying a thermoplastic resin to fibers or fabrics followed by curing. Various types of resin, including thermosetting and thermoplastic resins, have been used for preparing various composite materials. It is also common to combine a thermosetting resin with various kinds of fillers in order to enhance the properties of the resin. Among other attempts, it has been

found that the properties of the composites can be greatly improved when they are modified with nucleating agents. Other attempts have also been made to use various additives such as stearate, silane coupling agents, epoxy resin, titanium oxide, etc. in order to improve the properties of the composite materials. It is also known that the effects of the additives are increased when their properties are similar or complementary to those of the resin. It is known that the use of a thermoplastic resin as a matrix for a thermosetting resin has several

advantages as compared to their use in separate phases or compositions. For example, the thermosetting resin can lower the cost of the process and also produce a strong and durable sheet having improved physical and chemical properties. Various thermoplastic resins have also been used to prepare composite materials. U.S. Pat. No. 5,750,145 describes a process for producing a composite material for laminates which involves applying a thermoplastic resin to a fabric, removing excess resin to form a foam and further applying additional resin on the foam. U.S. Pat. No.

5,130,047 describes a method of coating a thermosetting resin on a knitted fabric using a thermosetting resin selected from the group consisting of phenolic resin, epoxy resin, polyester resin, vinyl resin, melamine resin, etc., along with a wetting agent, drying agent, etc. U.S. Pat. Nos. 4,994,510 and 5,017,523 describe a method for binding a fiber material with a thermosetting resin in an aqueous medium containing a
