Dynamic Input Autodesk provides the Dynamic Input Library which enables AutoCAD Product Key to read and write a new type of XML-based file format known as Dynamic Input. Dynamic Input includes a new type of file format, allowing it to store drawing and structure information that is viewable from any program, regardless of which version of AutoCAD the program is running on. When opened, the Dynamic Input files appear to be .DWG files with a new file type extension, .dwgx. The Dynamic Input file is an XML-based file format and can be saved in various file formats such as .DWG, .SHP, .DAE, .SVG, .DXF, .PDF and .DWF. Dynamic Input is also fully editable in AutoCAD and other applications. Dynamic Input also can be viewed in a web browser by opening the file directly,

or viewed from a web server by creating a web page containing Dynamic Inputs. Implementation The.dwgx files are files for AutoCAD that are viewable in other applications. The interface is similar to the typical.DWG interface: there are tabs on the left and the drawing window on the right. The tabs on the left are the same for each drawing. They include: Layout: provides the user interface for creating and editing the drawing elements. Details: provides the user interface for editing drawing elements. Data: provides the user interface for editing drawing data. Data views: provides the user interface for viewing drawing data, such as values, geometry, and attributes. Scale: provides the user interface for editing drawing scale. In addition, there are various other tabs in the design window that are specific to each drawing: Bookmarks: provides the user interface for editing bookmarks. Polar: provides the user interface for creating and editing polarities. Hidden lines: provides the user interface for creating and editing hidden lines. Layout view: provides the user interface for viewing the drawing layout, including layers, linetypes, named views, etc. Graphs: provides the user interface for creating and editing object arrays, custom graphs, and custom object arrays. The features provided are similar to the basic interface of.DWG: they are created and edited the same way, they are linked and shared among drawings, they can be printed or exported, etc.
